Neuroimaging Dataset

Pipeline Report | BIDS 1.9.0 | 2026-03-01 19:58 UTC

Pipeline Overview

Dataset readiness by stage. ✓ = verified from artefacts, ✕ = failed, – = not verifiable from the BIDS dataset alone (prior step). See sections below for details.

1 De-identify – → 2 Convert to BIDS ✓ → 3 Verify Integrity ✓ → 4 FAIR Audit ✓ → 5 Report ✓

1	2	21	3.12 MB
SUBJECTS	BIDS MODALITIES	TOTAL FILES (BIDS)	TOTAL SIZE

83.3%

FAIR SCORE

Subjects: participant directories named `sub-*` in the BIDS dataset, one per individual. The ID is assigned at conversion time via `--subject-id`. | **BIDS modalities**: imaging data types inferred from NIfTI filenames (e.g. `bold` for fMRI, `T1w` for structural MRI). Each series description is mapped to a BIDS suffix in `convert.py`.

Source Data

Scanner 1	**GE DISCOVERY MR750** — 3.0 T

Series	Axial EPI-FMRI (Interleaved I to S) Axial EPI-FMRI (Interleaved S to I) Axial EPI-FMRI (Sequential I to S) Axial EPI-FMRI (Sequential S to I)
Protocol	**TR:** 5.00 s **TE:** 30 ms **FA:** 60° **SW:** 27\LX\MR Software release:DV26.0_R01_1725.a
Scanner 2	**Siemens Skyra** — 3.0 T
Series	EPI PE=AP EPI PE=LR EPI PE=PA EPI PE=RL
Protocol	**TR:** 2.44 s **TE:** 50 ms **FA:** 75° **SW:** syngo MR E11

Protocol parameters sourced from DICOM headers, extracted by dcm2niix into BIDS JSON sidecars during conversion. ⚠ amber = value varies across series within the same scanner — potential protocol inconsistency to investigate before harmonisation.

BIDS Dataset Completeness

One row per subject found in the BIDS dataset (directories named `sub-*`). Subject IDs are assigned at conversion time via `--subject-id`. Each column is a BIDS modality suffix derived from the NIfTI filenames.

Subject	bold	unknown ⚠
sub-01	✓	✓

⚠ **unknown** modality: the following series descriptions were not recognised by the BIDS suffix mapper and were placed in `unknown/`: `EPI PE=AP`, `EPI PE=LR`, `EPI PE=PA`, `EPI PE=RL`. Add a matching entry to `SERIES_TO_BIDS_SUFFIX` in `convert.py` to assign the correct BIDS suffix (e.g., `"EPI PE=AP": "epi"` for a fieldmap).

Integrity Verification

✓ All 20 files verified — SHA-256 checksums match

Transfer manifest saved as `transfer_manifest.json`. Re-verify after transfer with: `neuro-curation verify --dataset DIR --check`

FAIR Compliance

83.3%
10/12 passed

[F] Findable (3/4)

- ✓ dataset_description.json exists
- ✓ Required field 'Name' present
- ✓ Required field 'BIDSVersion' present
- ✗ Recommended field 'Authors' present *(recommended)*

  Fix: *Add an 'Authors' list to dataset_description.json, e.g. ['Surname, Firstname'].*

[A] Accessible (2/2)

- ✓ README exists
- ✓ README has meaningful content *(recommended)*

[I] Interoperable (3/3)

- ✓ NIfTI files present in compressed format
- ✓ Files follow BIDS naming convention
- ✓ JSON sidecars present for NIfTI files

[R] Reusable (2/3)

- ✗ LICENSE file exists

  Fix: *Add a LICENSE file to the dataset root (e.g., CC0-1.0 text from choosealicense.com). Required for DPUK submission.*
- ✓ participants.tsv exists
- ✓ participants.json (data dictionary) exists *(recommended)*
